

CHC Consulting/Programming Services

"A cutting-edge computer network is at the heart of the CHC My Home OS. From any touch screen in the house, your clients can control every aspect of their home, including their DVD collection, MP3 music, recorded TV shows, Internet radio, security cameras, email, high-speed Internet, contacts, calendar, and digital photos, just to name a few."

Mike Seamons—President, Custom Home Control, Inc.

What is stopping your company from migrating to IP Control?

Problem #1—IP Systems are the Future

Expanding the IP network into other controllable environments is a natural progression of computers. Economies of scale, manufacturing, technological advancements, and convergence are all indicators of the future of automation.

Problem #2—Software Only Companies Lack Integrated Solutions

Installers are left on their own to figure out what hardware to

use, diagnose problems, and compose a working system. Lack of experience dealing with the hardware gives the impression that IP systems are unstable.

Problem #3—IP Systems are too scalable

With thousands of hardware manufacturers, millions of software programs, and an endless line-card of capabilities, it is difficult to get your hands around IP Systems. Integrators need direction and focus to keep the systems from becoming difficult and overwhelming.

Problem #4—Too Many PC Products

Too many PC based products to choose from is both a blessing and a curse of the IP System. Desktops, HTPC's, laptops, tablets, web pads, PDA's, monitors, routers, wireless access points, etc. are everywhere. Prices keep dropping as manufacturers become more aggressive, but which products are right for my project?

How can becoming a Team CHC Partner help?

CHC Expertise & Experience

CHC is more than a contract programming company. We have been integrating

complete home automation systems for 17 years and have utilized web control since 1995. We know what problems you will face and only recommend items we have personally integrated on our own projects.

Multi Platform Support

The CHC My Home OS supports all

standard computing platforms, ie Windows, CE.Net, Pocket PC, and MAC. CHC is also the only software available to support the new XP Media Center environment, empowering complete convergence with AV and Control.

Complete IP Solution Services

Hardware Consulting

We will help you establish the right hardware to use to achieve

the desired result. CHC employs an R&D lab to assess new technologies that have application in IP Control Systems.

Software Programming

The CHC programming process begins with filling out a house navigation worksheet, which we utilize to create the initial site layout. The site layout is published to a CHC hosted web server for review and feedback, after which all of the low level coding is added to support the integrated hardware. Once completed, CHC will manage the integration of the software by creating a Virtual Private Network (VPN) with the home for testing, debugging, and customization.
