

Enjoy the convenience of home automation, and save time, energy, and money, with Custom Home Control

Sit back, relax and let your home do the work. Quit trying to figure out which remote to use; stop wondering if you locked all the doors; sleep with the peace of mind knowing that your house is secure; and start to save on energy costs.

It is time for you to benefit from the advances made in home automation technology over the last 30 years.

Control the multitude of devices in your home all from a single device. Enjoy more time with your family now that you no longer have to waste time preparing your home to go to sleep or to leave for the day—simply push one button and watch as your automated home does all the work.

The ability of Custom Home Control to program daily events across all the systems in your home will save you time, energy and money. You choose what your home will do: run lights at 80%, monitor the interior and exterior temperature to maintain a constant 68 degrees, entertain your guests at the push of a button, or stream your favorite DVD to any television in your home.

The possibilities are endless and so are our capabilities.

If you can dream it, we can make it your reality!

For over 30 years, architects, contractors, and homeowners have been facing new and uncharted water in the field of electronic technology in the home. In the beginning, there were so few specialists and products in the industry that people who recognized the value of Home Automation Systems were happy just to find an installer who knew what they were doing, only to find themselves stuck with the limitations of proprietary manufacturers.

The market has since changed. The old paradigm of closed, proprietary systems for home automation is rapidly shifting to a new approach: Open Architecture.

Custom Home Control's (CHC) Integrated Electronic System Design model has set the standard for today's automation. Designing systems with the ability to interpret multiple protocols has eliminated the constraints proprietary systems forced upon home owners. It embraces the freedom to choose products from the proven technologies of Cisco™, Compaq™, Microsoft™, and many other industry leaders, delivering more stable, powerful systems, at lower costs and greater expandability.

The Power of Integrated Electronic System Designers

- Integrated Electronic System Designers See the Big Picture
- Integrated Electronic System Designers Solve Problems Creatively
- Integrated Electronic System Designers Help You Get the Most For Your Dollar
- Integrated Electronic System Designers Make Your Life Easier

As the most renowned open architecture home automation expert in the world, CHC approaches home electronic design from an architectural perspective as opposed to a typical proprietary manufacturer, dealer, or installer. Our unmatched portfolio of award-winning design includes 5,000 to 42,000 square foot masterpieces, and spans from the United States to China and even to Saudi Arabia. As unbiased, homeowner focused electronic technology experts, CHC Electronic Architects add unparalleled value to any project from consultation to completion.

CHC Electronic Architects are specially educated to help you define what electronics you want to control, present options you might never have considered, and help you get the most for your valuable investment. We don't just design automation and audiovisual systems—we create total environments, both interiors and exteriors that are technologically functional and exciting places to live and work

We are trained problem solvers and technology experts. Whatever your desire is for your home, we can design and program a system customized to your needs. Have a limited budget? Electronic Architects can propose the best way for you to get more for your investment than you could with any individual proprietary automation dealer. You will benefit from our unbiased approach because we listen to you and your needs then start from scratch when designing your system.

CHC Electronic Architects can reduce system installation and equipment costs, decrease your home's energy consumption, and increase its future resale value through expert design. Being an unbiased consultant allows us the opportunity to pass on cost-saving advice pertaining to multiple vendors manufacturing a plethora of products. It is our open-system philosophy which keeps us one step ahead of our competitors.

Home technology is endless and confusing, leaving the home owner and builder frustrated in technical support with a system that is too complex and impractical to use. Your CHC Electronic Architect represents you, not the manufacturers. CHC Electronic Architects look out for your interest by orchestrating the entire project, managing the actual installation and integration processes, and by ensuring that the end result is everything you expect it to be.

All of the above information has been taken from the American Institute of Architecture as the description of an Architect and then focused toward home technology. Homeowners have embraced the role of a structural architect as an integral part of their project. With technology becoming intertwined in every aspect of our lives, shouldn't you subject your electronic systems to an equally qualified professional?
